

LET'S BUILD A LEGO[®] SYDNEY TOWER EYE!

Step 1: Westfield Shopping Centre

Let's begin by building a rectangular shopping centre. This is going to look just like the real thing as well as making a nice, stable base for our tower. Make sure to criss-cross your bricks to keep everything together and make it really strong!

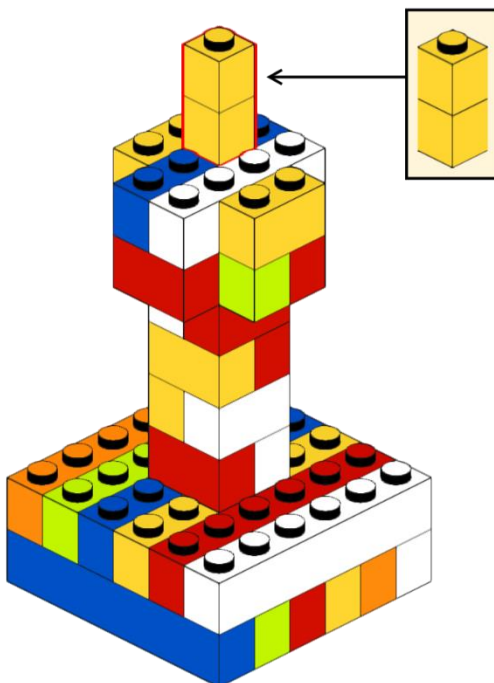

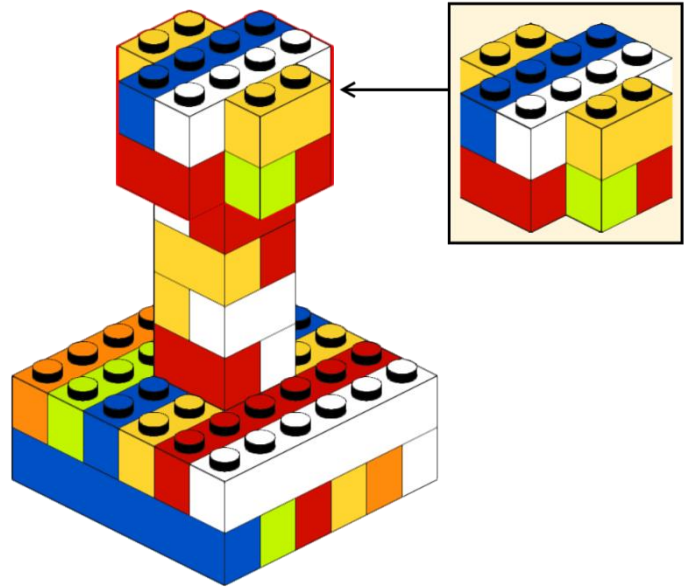

Step 2: The Shaft

The shaft is the tall column that makes up the middle of the tower. Add small bricks to build a tall section. Try the smallest bricks and see how strong your shaft is. It's a shame we can't build support cables, like the ones on the real tower!

Step 3: The Turret

The turret is the main part of the Sydney Tower Eye building. Build small layers of bricks in a pattern to make a circle. Try this – 2 studs, then 4, 4 again, then 2 to finish the layer. Build two of these in a criss-cross pattern to make a circular turret shape. Try different sizes of turret!

Step 4: The Spire

The spire is the tall spike on top of the tower. Use tiny bricks to make a long, tall piece on top of your tower. Your spire might not be right in the middle of your turret, but that's okay!

Your LEGO Sydney Tower is complete! Take a photo of your creation and share it with us! What other amazing models can you make?
